

Screencasts

Directions

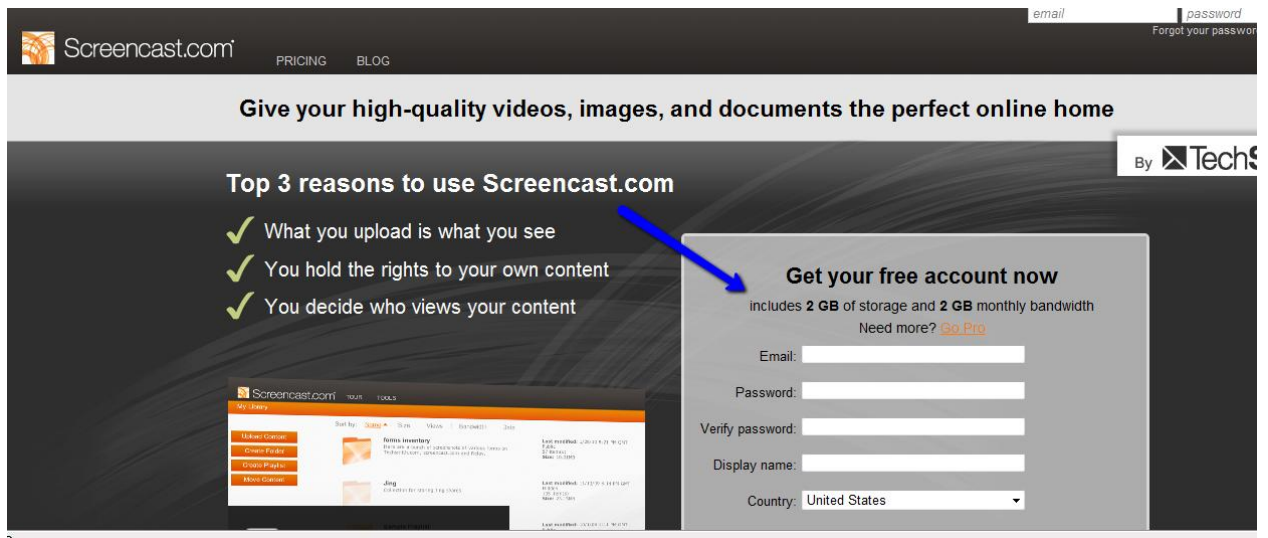

Part I

1. Copy and paste the following into your browser: <http://www.techsmith.com/jing/>

2. Once there, watch the “Overview Video” (it is located about midway down the screen)
3. Download the free version of Jing. The “Download” button is next to the “Overview Video” option.

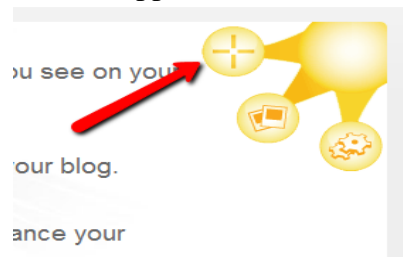

- You may also need to create a screencast.com account before you will be able to save your 'jing screencasts' as links. Go to: <http://www.screencast.com/>

- Fill in your information in the gray box that says “Get Your Free Account now”. Once your account is registered, you should be able to save jing videos to your screencast account.

Part II

- Now that you have all the needed software, it's time to make your screencast! Bring the document you would like to talk about (i.e., the electronic poster in this case) onto your screen
- Hover over the yellow half circle at the top of your computer screen. (If it isn't there, open Jing through your programs and it will pop up.) Point your arrow/clicker at the cross that pops out; the word 'capture' will appear. Select this.

3. Now you can select the size of the screenshare. Drag and drop the lines that appear so that your entire document (electronic poster) is visible.
4. A little box will appear in the bottom left corner of your highlighted screen; select “capture video” (this is the 2nd option).
5. A countdown clock will begin providing you with 3 seconds to prepare yourself. Then you simply talk about your topic (poster).
6. If you wanted to share other documents (though not recommended or required for the Poster Presentation), you can bring up any page or item you like. The jing works like a screenshot. Whatever you see on your computer is recorded.
7. You are limited to 5 minutes in the free version so be aware of this! The timer in the bottom of the highlighted screen will begin to blink when time is running out.
8. If time runs out, the box of options will automatically pop up. If you finish before 5 minutes, you can select ‘Stop’ and the box of options will appear.
9. Select “Save via Screencast.com”, which is the first option and includes an image of three vertical arrows pointing upwards.
10. At the top of the computer screen, you will see the progress of your screencast being saved. DO NOT close this.
11. When it is done, it will tell you it is ready to be shared. You can select the link to go directly to your screencast (then copy and paste the link in the browser to a file or into a discussion forum in Amvonet/Moodle so you can share with others), or you can login into your screencast account and select it that way. Once the screencast opens (it won’t start- you press play to make it start), the browser will contain the direct link that you can share.
12. Screencasts remain in your account unless you delete them.
13. Screencasts are very useful in a variety of situations and provide you with a multitude of opportunities to get creative for future projects, or even when chatting/communicating with friends.

14. If you have further questions, please post them in our Class Q & A.
