13. The thing I like best about this class is:

Text Response

the instructors are very approachable

Instructors are very knowledgeable and the content is interesting

I've learned a lot, I've never had a class based on assessments so I've been finding the material very useful.

The instructors listen to concerns and help when needed.

I like that both professors are knowledgeable and ready to answer questions. The course is relevant to my field so the information in the reading are helpful and understandable.

The discussion and dialoge with the students and professors on assessments

14. The thing I most dislike about this class is:

Text Response

I think we should have had classes that showed us the assessment kits in class and how to administer each one

There is so much assigned reading and other work to be completed before we even meet for the week. On top of all the reading it seems to be all we do in class is discuss it. This past week was really frustrating- spending 40 minutes discussing the assigned readings in pairs and then the rest of class discussing the SAME thing as a large group. It was overkill and the time could have been spent better. Instead of being let lose with assessments we know nothing about, time in class should have been spent actually reviewing tangible assessments, looking through them and really learning how to administer them. It is like we are wandering through the wilderness trying to figure out how to use these assessments on our own.

The technology during class, out of class has been fine

The technology effected my learning. This is on no part the teachers's fault but feel that it has lessened my learning experience and participation. Also, if this is an assessment class, different assessments should be readily available for students to look and use for their assignments. We pay good money to be proficient educators for the field of special education and a big part of sped is assessments. If you want strong excellent teachers who have a good solid knowledge base for assessments, then there should be a variety and supply readily available for graduate students. Again, the is not a reflection of my professors. They are knowledgable, but Kent should be providing the best tech available and assistance for the money we pay to attend.

Not being abale to have the assessments in the class and time for all of us to walk through administering, score, summarize, and share the result. I feel like working on the same assesment tool as a class and going through the steps would have been more helpful.

15. If I could change one thing about this class it would be to:

Text Response

having the kits in class

Have several assessments available to explore, learn, and understand during class time.

The technology. Wimba should work and the resources.

See previous response. I woudl bring assessment tools for us to work on as a class as we go through the steps. Also, I woudl not start the class and have assignmnets due the first night (the movie). It was a lot to do in two days.
